Propagation of Errors—Basic Rules

If an object is placed at a distance p from a lens and an image is formed at a distance q from the lens, the lens's focal length can be found as $f = pq/p+q$: (1) (a) Use the general rule to derive a formula for the uncertainty $-f$ in terms of p, q, and their uncertainties. (b) Starting from (1) directly, you cannot find $-f$ in steps because ...

Detecting Earnings Management - JSTOR

Amy P Sweeney Harvard University ABSTRACT: This paper evaluates alternative accrual-based models for detecting earnings management. The evaluation compares the specification and power of commonly used test statistics across the measures of discretionary accruals generated by the models and provides the following major insights. First, all of the

The Levenberg-Marquardt algorithm for nonlinear least squares....

4 The Levenberg-Marquardt algorithm for nonlinear least squares If in an iteration $p_i(h) > 4$ then $p+h$ is sufficiently better than p, p is replaced by $p+h$, and λ is reduced by a factor. Otherwise λ is increased by a factor, and the algorithm proceeds to the next iteration. 4.1.1 Initialization and update of the L-M parameter, λ , and the parameters p In m users may select one of three ...

1 Gambler's Ruin Problem - Columbia University

The answer is given by (4) and (5): If $p > 0.5$ then the probability is given by $(q/p)^i > 0$, whereas if $p \leq 0.5$ ruin will always occur. This makes intuitive sense because if $p > 0.5$, then the average net income per day is $E(\Delta) = p - q > 0$, whereas if $p \leq 0.5$, then the average net income per day is $E(\Delta) = p - q \leq 0$. So the company ...
